Full-Stack Developer with 5+ years of experience building and maintaining production web applications using Laravel (REST APIs, MVC) and React. Experienced in working with legacy systems, designing maintainable architectures, and delivering end-to-end solutions in Agile environments.

SKILLS

Back-end

PHP, Laravel, REST API, PHPUnit

Front-end

React, TypeScript, Tailwind, HTML5, CSS3, JavaScript, Bootstrap, JQuery

Databases

MySQL, OracleSQL, PostgreSQL

DevOps & Tools

Docker, Github, GitLab CI/CD, Composer, Postman, AWS, APIs

Methodologies

Agile/Scrum, SOLID, KISS, DRY, YAGNI

EXPERIENCE

10A, Cracow — Full-Stack Developer

Dec 2023 – Dec 2025

- Led development and maintenance of suzuki.pl and the "Moje Suzuki" mobile app backend (Laravel Lumen), serving over 15,000 vehicle owners.
- After 7 months, took full ownership of the PHP codebase and technical direction following the departure of a senior developer.
- Architected and implemented a new warranty service microservice for the Moje Suzuki platform from scratch: designed the API, wrote documentation, and coordinated integration with the front-end developer.
- Proactively identified inefficiencies and designed a comprehensive admin panel for suzuki.pl, automating 90% of routine content updates and freeing the team from developer dependency.
- Executed a critical legacy system upgrade from PHP 7.1 / Laravel 5.6 to PHP 8.3 / Laravel 11, resolving 150+ compatibility issues and modernizing the architecture.
- Contributed to new internal projects: developed the front-end (React + TypeScript + Vite + Tailwind) for the MindApp educational platform and built a Laravel+React email newsletter system for the cHow product.
- Collaborated closely with designers, QA, and the client in an Agile environment (daily stand-ups, ClickUp, Slack), translating business needs into technical solutions.

SMF.de, Cracow — Backend Developer

Jan 2023 – Aug 2023

- Worked in a technical support (IT Support) capacity on a large-scale legacy Symfony application for BP gas stations.

- Tasked with investigating long-standing critical production bugs through log analysis, local reproduction, and debugging using Xdebug and PhpStorm.
- Gained hands-on experience with OracleSQL and large relational schemas in a corporate enterprise environment.
- Followed established GitHub workflows and participated in code reviews and Agile/Scrum rituals (daily meetings, sprint planning).

SEBDAN, Lodz — Full-Stack Developer
Jun 2020 – Dec 2022

- Progressed from a technical intern to the key full-stack developer, overseeing the full lifecycle of 15+ custom Laravel web applications (e-commerce, real estate, education).
- Pioneered the adoption of Laravel within the company, becoming the internal expert and mentor for colleagues and interns.
- Autonomously managed client projects: conducted requirement meetings, created technical estimates, planned sprints, and delivered end-to-end solutions.
- Architected and developed complex systems, including:
  - A school catering management system with dual interfaces for school administrators (managing menus, classes, payments) and parents (registration, one-click meal selection, online payments via PayU).
  - The Ostoja Park real estate portal, featuring an interactive visual banner to explore buildings/flats/apartments with dynamic availability status.
- Integrated third-party APIs (PayU, Baselinker), performed SEO optimization, and built custom admin panels for each project.
- Developed internal company tools: the corporate website and a custom project management system (similar to ClickUp) for tracking tasks and billable hours.

EDUCATION

Jan Kochanowski University, Kielce
2016 - 2020
Bachelor's Degree in Information Technology

LANGUAGES

Ukrainian (Native)

Polish (Advanced)

English (Upper-Intermediate)
